xSystem 3+ Bluetooth F.A.Q’s

Q: Do I need to use the Bluetooth functionality?

Q: Do I have to have my phone always connected?

Q: What are the Scottoiler App Minimum Requirements?

Q: How do I know when my xSystem has successfully paired with my phone?

Q: What is “Always On” Mode?

Q: How can I reset the xSystem to factory defaults if I am selling my motorcycle (with the xSystem included) or changing my mobile phone?

Q: Do I need to use the Bluetooth functionality?

No, the Bluetooth functionality and App use is entirely optional and just an additional, optional feature for customers to further adjust settings.

Q: Do I have to have my phone always connected?

No, the Bluetooth app is designed to change settings, not to give any overview

while riding. When settings are changed, these are written to the xSystem and after that the app can be disconnected. The app will also automatically disconnect after 5 minutes of inactivity so as not to distract while riding.

Q: What are the Scottoiler App Minimum Requirements?

- Android 10 released in 2019
- Apple iOS 13 released September 2019

Q: How do I know when my xSystem has successfully paired with my phone?

When connecting a new xSystem device to an Android phone the “Pairing” Dialogue Popup will appear twice. This is a good indication of a successful initial bonding. Should the pairing dialog popup only appear once there might be an issue with the bonding process. If this happens, please follow the reset procedure and switch the xSystem off and then on again before re-attempting pairing.

When connecting a new xSystem device to an iOS device the “Pairing” Dialogue Popup will appear once.

Q: What is “Always On” Mode?

Changing the advanced settings mode to “Always On” will tell the xSystem to always activate the device at the chosen flow rate setting and disregard any movement triggering. The xSystem will continue to deliver oil even when the motorcycle is at a standstill or turned off in the garage. The “Always On” function can be useful when setting up the system but care must be taken to

return to normal to avoid continual operation. As such, modifying the advanced settings should only be done by experienced users and when it is understood what the function does.

Q: How can I reset the xSystem to factory defaults if I am selling my motorcycle (with the xSystem included) or changing my mobile phone?

Press and Hold the DOWN button for 11 seconds. Next, power down the xSystem and then power-up again shortly afterwards. This power cycling is important to fully return the unit to manufacturers default settings.
