

How to join delivery tubing together

Joining Pieces

If necessary, damaged tubing can be re-joined or extended using a joining piece made from Scotttoiler vacuum tubing.

Heat the end of the black nylon tubing by twisting it over the flame of a lighter or match until you see the end “mushroom”. This only takes 1 – 2 seconds.

Let the mushroomed end cool and then push it into the end of the Delivery Tubing for an air-tight seal.

If making a joining piece, repeat the above steps to mushroom the other end of the black nylon tube and connect the new section of delivery tubing.
